COMPLETE PROJECT PORTFOLIO

Digital Marketing & Branding

+

Python Programming

COMPLETED TASKS 2, 3 AND 4 IN EACH TRACK

Evidence-backed portfolio assembly • final review candidate

Prepared for owner review • No form submission or certificate claim is made by this document

PORTFOLIO OVERVIEW

Executive summary

This portfolio brings together two completed project tracks: **Digital Marketing & Branding** and **Python Programming**. It combines the approved final-candidate reports with concise evidence pages that map the work to its canonical research, code, tests and QA records.

It represents **six completed Task 2–4 deliverables**. The document distinguishes researched observations, proposed or modeled work, and tested software behavior. It does not claim that any proposed campaign ran, that modeled results were achieved, or that either certificate has been accepted.

2

complete project tracks

6

represented Tasks 2–4

Evidence category	What this portfolio shows	Boundary retained
Digital Marketing	A 38-page audit, campaign and SEO/acquisition report with its complete email appendix.	Task 2 remains an evidence-limited public-source audit pending organizer acceptance.
Python Programming	A 14-page report covering Fibonacci timing, safe file automation and a rule-based chatbot.	The report preserves code explanations, outputs, tests and stated limitations.
Verification	Source preservation, PDF QA, model checks and cross-track unit-test evidence are indexed.	Technical readiness does not confirm external certificate eligibility.

NAVIGATION

Contents

The printed page references use the physical page order of this portfolio. The PDF outline supplies matching internal navigation.

Section	Portfolio page	Purpose
Cover	1	Document identity
Executive summary	2	Scope and evidence boundaries
Results at a glance	4	Verified project scale and model coverage
Digital Marketing & Branding introduction	5	Research and proposal boundaries
Approved Digital Marketing report	6–43	Task 2 audit; Task 3 campaign; Task 4 strategy and email appendix
Task 2 / Task 3 / Task 4 / appendix starts	8 / 12 / 32 / 38	Internal locations in the approved Marketing report
Python Programming introduction	44	Implementation scope and evidence
Approved Python report	45–58	Tasks 2, 3 and 4
Python Task 2 / Task 3 / Task 4 starts	47 / 50 / 53	Internal locations in the approved Python report
Selective verification and project evidence	59	Preservation, tests and QA summary
Conclusion and source / reproduction index	60	Canonical paths and GitHub links

VERIFIED PROJECT RESULTS

Results at a glance

The figures below are drawn from the retained task models, approved reports and final-audit records. Proposed and modeled values are identified as such; they are not campaign or customer outcomes.

3
competitor brands researched

53
planned cross-channel actions

30
campaign days modeled

4
planned A/B experiments

10
draft email messages

129
cross-track unit tests recorded in final audit

Workstream	Verified scope	Planning / test result
RefillLoop campaign	30 Instagram, 12 LinkedIn and 11 YouTube actions; 3 audience personas; 15 planned paid placements.	Proposed USD 3,000 media budget: Instagram USD 1,350, LinkedIn USD 1,050, YouTube USD 600.
Ocean Bottle strategy	12 keyword-intent entries; 4-page SEO map; 4-stage funnel; 4 consent-aware email workflows.	Proposed GBP 12,000 total / GBP 10,000 media model. Low / base / high: 75 / 160 / 320 modeled customers; media CAC GBP 133.33 / 62.50 / 31.25; ROAS 0.34 / 0.88 / 2.08.
Python implementation	Three approved modules: Fibonacci and timing, safe file automation, and a multi-intent rule-based chatbot.	Final audit records 55 Python-suite tests within 129 cross-track unit tests and two corrected P1 code defects.

TRACK ONE

Digital Marketing & Branding

The following **complete 38-page approved report** is imported unchanged. It contains Task 2, Task 3, Task 4 and the supporting Task 4 email appendix in the approved internal order.

Task	Complete included deliverable	Evidence / claim boundary
Task 2	Competitor footprint audit of Stanley 1913, Hydro Flask and Owala.	Evidence-limited public-source audit. Historical net-count changes are proxies; HypeAuditor engagement values are vendor estimates; verified 15 Sep–12 Oct posting cadence and organizer acceptance remain unavailable.
Task 3	RefillLoop 30-day plan covering 53 actions, three channels, three targeting specifications, four A/B tests and proposed USD 3,000 media pacing.	Fictional proposed campaign. No product launch, media spend, achieved performance or customer result is claimed.
Task 4	Ocean Bottle keyword, SEO, acquisition and email-workflow strategy: 12 keyword entries, four workflows and ten full message drafts.	Recommendations and GBP financial scenarios are proposed models, not observed marketing activity or customer performance.

Navigation: the imported report begins on Portfolio page 6. Its Task 2 section begins on page 8, Task 3 on page 12, Task 4 on page 32 and its email appendix on page 38. The portfolio outline contains matching destinations.

PROGREE

DIGITAL MARKETING & BRANDING

Tasks 2, 3 and 4 — consolidated review copy

Reporting period: October 2026

Prepared for final independent PDF and submission review

Anonymous review document. It contains no personal identity information.

Contents

Cover 1

Anonymous title and reporting period

Contents 2

Task navigation and evidence boundaries

Task 2 — Evidence-Limited Public-Source Competitor Audit 3

Actual public-source and reviewer-supplied secondary evidence; cadence and engagement remain unavailable.

Task 3 — RefillLoop 30-Day Campaign 7

Fictional proposed campaign plan; no content was published and no media spend occurred.

Task 4 — Ocean Bottle SEO & Acquisition Strategy 27

Modeled strategy; assumptions and scenario outputs are not measured results.

Task 4 Supporting Appendix — Email Workflows 33

Proposed inactive email scripts and consent-aware workflow rules.

Review status: Task 2 is an evidence-limited public-source audit and remains pending organizer acceptance of rubric coverage. Organizer confirmation and final user authorization are also pending. Tasks 3 and 4 are proposed or modeled work, not live campaign results.

Reusable hydration: competitor footprint audit

Stanley 1913 • Hydro Flask • Owala | Secondary-evidence integration | 14 October 2026

PARTIAL DRAFT — NOT A COMPLETED MEASURED AUDIT. Three brands are compared using direct 14 October website/profile snapshots and separately attributed independent research dated 13 October. No social campaign was executed.

Common social observation window: 15 September–12 October 2026 UTC, 28 days. Current website observations are outside this period and support positioning only.

Provenance and account identity

Brand	Primary website / Instagram	Independent LinkedIn observation
Stanley 1913	stanley1913.com / @stanley1913_brand	linkedin.com/company/stanley-1913
Hydro Flask	hydroflask.com / @hydroflask	linkedin.com/company/hydro-flask
Owala	owalalife.com / @owala	linkedin.com/showcase/owala-hydration/

Owala is an affiliated brand showcase. Trove Brands is parent-company context; its posts must not be substituted for Owala posts. LinkedIn references above were independently observed, not directly retrieved by Codex. Hydro Flask and Stanley YouTube links were verified from brand websites; channel content was inaccessible.

The handoff is a source-discovery and qualitative starter, explicitly not an exhaustive period dataset. Original proxy failures, later successful website/profile captures, and the supplied original text remain separate records.

Positioning and creative comparison

The following observations are attributed to the independent 13 October handoff and linked official websites. Audience and differentiation conclusions are analytical interpretations, not verified demographics.

Brand	Reviewer-observed website cues	Interpretation and conversion emphasis
Stanley 1913	Quenchers; leakproof products; accessories; colour-led navigation; fall/Halloween and collaborative collections.	Collection-led lifestyle identity and fandom provide multiple routes to shop. Interpretation: relevance extends beyond basic hydration utility.
Hydro Flask	Limited seasonal editions; customization; everyday hydration; lightweight products; Ocean Conservancy partnership.	Functional choice and personal expression coexist. Partnership presence is observed; no environmental outcome or effectiveness is inferred.
Owala	FreeSip; customization; Color Drop; accessories; playful language.	Product functionality is packaged as novelty and self-expression. Interpretation: accessible, expressive product discovery rather than evidence of a measured audience.

Direct 14 October recovery evidence corroborates seasonal merchandising, product choice and playful messaging: Stanley Devin Booker/Join the Club; Hydro Flask Midnight Glimmer/Find your bottle; Owala Cupholder friendly/Color Drop. Full claim-level citations remain in recovery/observations.json.

Visual evidence boundary: Stanley and Hydro Flask rendered homepages were inspected in the earlier recovery. Owala assets loaded incompletely; colour comments rely on image alt text. No unlicensed brand images are reproduced. Social editorial frequency, creator-post diversity and channel-specific effectiveness are not demonstrated.

Secondary Instagram comparison: explicit limits

HypeAuditor account pages were independently revisited through ChatGPT public web research on 14 October 2026 UTC. Codex direct retrieval remained blocked. No independent raw HTML snapshot was supplied. These are reviewer-attributed vendor records, not first-party Instagram observations.

Brand / vendor profile	16 Sep total	12 Oct total	Net change	Nominal net change/week	October vendor estimate
Stanley 1913 hypeauditor.com/instagram/stanley1913_brand/	2459	2474	+15	4.04	1.19%
Hydro Flask hypeauditor.com/instagram/hydroflask/	3834	3849	+15	4.04	2.38%
Owala hypeauditor.com/instagram/owala/	1104	1121	+17	4.58	2.71%

Proxy formula: net cumulative count change / 26 × 7. Snapshot dates are a nominal 26-day interval, not the full 15 September–12 October inclusive 28-day period. The proxy is **NOT verified publication frequency**: removals, archiving and vendor data handling may affect cumulative totals. No September 15 total is inferred.

Engagement classification: the October percentages are HypeAuditor proprietary estimates. They were not independently computed from visible likes/comments and exact followers and are not restricted to the assignment window. The method is not established as equivalent to a visible-interaction proxy. Higher displayed estimates do not establish better conversion, ROI or causal advantage.

Interpretation: Owala has the largest reported net-count change and vendor estimate in this limited secondary table; Stanley and Hydro Flask share the same net change. This describes vendor records only. It does not establish superior posting volume, campaign effectiveness or cross-platform performance.

Still unavailable: verified dated post counts, exact 28-day cadence and independently calculated period engagement for all three brands. LinkedIn and YouTube rates and period inventories remain unavailable; never substitute these Instagram estimates across platforms. Missing primary measurements remain null, not zero.

Evidence: research/task2/secondary/observations.json and VERIFIED_SOURCE_NOTE_2026-10-14.md. The table URLs identify the vendor accounts; full precision calculations are reproducible in secondary/secondary_metrics.py. Original proxy errors remain in historical evidence.

RefillLoop opportunities and completion decision

Priority	Specific hypothesis grounded in observed cues	Required validation
1: utility proof	Pair modular replacement demonstrations with transparent compatibility guidance; counterbalance collection-led discovery with practical ownership information.	Test comprehension and click intent; do not claim competitors lack utility content.
2: guided choice	A use-case chooser for commute, office and travel connects function, personalization and clearly specified trade-offs.	Prototype usability test; compare with existing competitor selection pathways.
3: coherent education	Coordinate Instagram short demonstrations, LinkedIn workplace use cases and YouTube detailed walkthroughs around one verifiable feature.	Validate proposed product capability and audience response before launch.

These recommendations are proposed market-entry hypotheses, not proven unmet gaps or achieved RefillLoop results. Website cues do not prove recurring social themes, community strategy, creator effectiveness or cross-platform consistency.

Completion recommendation: retain Task 2 as incomplete for measured-audit approval. The report now supports a limited third-party Instagram snapshot comparison alongside qualitative positioning. Material grading risks remain: no verified social content sample, exact posting cadence, or cross-platform engagement. A dated comparable post inventory with public interactions would resolve the evidence gaps; organizer acceptance of the explicitly disclosed limited method could resolve the grading scope. Do not claim completion without that evidence or approval.

Full newsroom, press-kit and account links plus review date/provenance appear in research/task2/handoff/PUBLIC_SOURCE_HANDOFF_2026-10-13.md. Direct source timestamps/digests: evidence/task2/recovery/source_records.json and browser_records.json.

Reproduction: python digital_marketing/tools/generate_task2_secondary_report.py . Original assignment brief: Digital Marketing & Branding Tasks & Instructions.md. Earlier reports are historical and unchanged.

REFILLLOOP

30-Day Multi-Channel Campaign Execution Roadmap

Instagram • LinkedIn • YouTube

A fictional proposed modular reusable-hydration campaign. All product features, audiences, budgets, KPI values, and outcomes are planning assumptions or targets—not live-market facts, customer results, or a published campaign.

Campaign premise and positioning

Fictional proposed campaign; no product launch, performance, customer, or environmental claim.

A proposed routine-design system for people whose hydration needs shift across commute, desk, training, and travel—not a claim of market leadership.

Proposed differentiation

Route	Planning use
Modular routine framing	A campaign design choice to test; not a verified market advantage.
Cross-channel habit education	A campaign design choice to test; not a verified market advantage.
Workplace activation toolkit	A campaign design choice to test; not a verified market advantage.
Feedback-led concept validation	A campaign design choice to test; not a verified market advantage.

30-day narrative

Days 1–7 frame everyday refill friction; Days 8–12 reveal the concept; Days 13–18 educate around proposed routines; Days 19–22 run planned message tests; Days 23–30 invite early-access interest and capture learning for a future authorized launch.

Product and pricing assumptions

• RefillLoop is a proposed modular reusable hydration system with replaceable carry components.

• A proposed companion experience supplies optional routine prompts; no health, scientific, or impact benefit is claimed.

• Illustrative early-access price hypothesis: USD 44–64; validate willingness to pay before a real launch.

Audience, objectives, and channel roles

Personas are planning devices, not research-derived customer profiles.

Persona	Motivation / pain point	Targeting assumption
Maya — hybrid commuter	Reduce carry friction across changing locations Forgets or abandons routines when plans change	Interest/context test: commuting, hybrid work, productivity; exclude unsupported demographic inference.
Sam — active routine builder	Keep a repeatable work-to-training routine Needs simple cues and portable organization	Interest/context test: training routines, wellbeing content, reusable products; test creative, do not assume conversion.
Aisha — workplace wellbeing lead	Offer low-friction routine prompts for hybrid teams Needs practical, measurable internal activations	LinkedIn job-function/context test: people operations, workplace experience, facilities; use platform policy-compliant targeting only.

SMART objectives

Objective	Target / assumption	Measurement
Build qualified concept awareness	Over 30 days, deliver 120,000 proposed paid-and-organic impressions while recording platform-native reach separately. *Baseline: No prior audience or account baseline is available.*	Platform reach exports and UTM-tagged landing-page sessions.
Validate message routes	Run at least four planned A/B creative or CTA comparisons and retain a decision log by Day 30. *Baseline: No prior creative winner is assumed.*	Predefined primary KPI per test; do not call a winner without adequate delivery and context.
Generate early-access intent	Model 30 base-scenario qualified interest-form completions over 30 days; report 300 only as a stretch scenario with separate traffic conditions. *Baseline: Base scenario uses 120,000 impressions, 1.0% assumed CTR, and 2.5% assumed form completion; not a forecast.*	Consent-aware form-completion event and source UTM.

Channel roles

Instagram delivers routine prompts, visual saves, polls, and community response. LinkedIn delivers professional storytelling, workplace use cases, and toolkit content. YouTube uses Shorts for discovery and long-form video for concept demonstration and implementation detail.

Targeting and keyword strategy

All filters below are proposed and must be checked against current platform policy, account eligibility, controls, consent obligations, and minimum-audience rules before launch. They are not evidence that a filter is available or that an audience will perform.

Platform	Proposed audience / inclusion	Placement, event, and safeguard
Instagram	**Market:** Proposed initial test market: Karachi metropolitan area; rationale: one defined urban test area makes creative learning easier to interpret. This is not evidence of demand. **Language:** English creative; review Urdu adaptation for comprehension and platform capability before launch. **Age:** Proposed 23–40 where available; verify current platform controls. **Include:** Policy-compliant interest/context tests around commuting, hybrid work, productivity, fitness routines, and reusable products; verify availability before use.	**Placement:** Reels, Stories, and Feed tested separately; retain placement-level reporting. **Event:** Consent-aware early-interest form completion or qualified concept-page visit. **Exclude:** Exclude existing interest-form completers from conversion retargeting where a lawful consent-aware audience is available; do not infer sensitive traits. **Policy:** Use platform-approved controls only; verify options and privacy requirements before a live campaign.
LinkedIn	**Market:** Proposed initial test market: Karachi metropolitan area; use a single professional-context test area for interpretable learning. **Language:** English professional copy; review Urdu adaptation separately if supported and appropriate. **Age:** No age-based professional targeting is proposed; use platform-approved professional context only. **Include:** Verify current targeting for people operations, workplace experience, facilities, and operations functions; use role/function contexts, not sensitive inferences.	**Placement:** Feed and document/article formats; compare sponsored document with text-post treatment. **Event:** Qualified toolkit download or consent-aware early-interest form completion. **Exclude:** Exclude current employees and completed interest-form audiences only where lawful, consented, and supported by the platform. **Policy:** Platform controls and minimum-audience rules must be verified before launch.
YouTube	**Market:** Proposed initial test market: Karachi metropolitan area; separate geographic expansion from the first creative test. **Language:** English spoken/captioned creative; review Urdu captions or alternate creative before use. **Age:** Proposed adult audience only where age controls are available and policy-compliant; verify current options. **Include:** Contextual tests around commuting organization, workplace productivity, fitness routines, and reusable-product education; verify placement controls.	**Placement:** Shorts for discovery; skippable long-form/contextual inventory for demonstrations; report format separately. **Event:** Qualified concept-page session or consent-aware early-interest form completion. **Exclude:** Exclude made-for-children content and unsuitable placements using current documented controls; do not profile sensitive audiences. **Policy:** Verify current YouTube/Google Ads targeting, placement, and consent requirements before launch.

Keyword and tag clusters

Every editorial action is assigned one primary keyword, supporting terms, discovery intent, and channel-appropriate tags. These are proposed discoverability inputs for a fictional product; they are neither measured search-volume claims nor evidence of platform delivery.

Cluster	Primary and supporting terms	Discovery intent / proposed tags
Commute	**Primary:** commuter hydration routine hybrid work commute, bag packing routine, desk to gym	Find ideas for changing locations and carry contexts. #RefillLoopConcept, #ReusableHydration, #RoutineDesign
Education	**Primary:** refill habit education hydration routine checklist, care checklist, habit stacking	Learn a proposed routine or care framework without performance claims. #RefillLoopConcept, #ReusableHydration, #RoutineDesign
Modular	**Primary:** modular reusable bottle concept modular product design, reusable hydration, product concept	Understand the proposed modular-product framing. #RefillLoopConcept, #ReusableHydration, #RoutineDesign
Routine	**Primary:** reusable hydration routine daily refill habit, routine design, carry routine	Discover practical routine prompts for a proposed reusable-hydration concept. #WorkplaceWellbeing, #RoutineDesign, #ProductConcept
Workplace	**Primary:** workplace wellbeing routine workplace hydration prompt, hybrid team wellbeing, facilities activation	Find a proposed workplace implementation or discussion tool. #WorkplaceWellbeing, #RoutineDesign, #ProductConcept

Calendar application

The editorial calendar prints the primary keyword and proposed tags on every action. Instagram tags support topic discovery; LinkedIn tags support professional context; and YouTube tags and titles support video discoverability. The campaign team should review current platform guidance before publication and avoid implying unverified product capabilities.

Paid media, measurement, testing, and safeguards

Platform	Proposed media allocation	Role
Instagram	USD 1,350	Amplify the platform role; no spend incurred.
LinkedIn	USD 1,050	Amplify the platform role; no spend incurred.
YouTube	USD 600	Amplify the platform role; no spend incurred.
Total	USD 3,000	Illustrative media-only planning budget; no spend is authorized or incurred.

Budget-control rules

No money is authorized or spent by this plan. Before a future authorized launch, reconcile approved platform budgets against this allocation, apply account-level spend caps, retain pacing records, and pause any action that lacks approved creative, consent handling, or a valid conversion destination.

Budget pacing

Each paid action maps to a day, platform, phase, and proposed allocation. The rows below reconcile exactly to the proposed USD 3,000 media budget; organic actions have no paid allocation.

Day / action	Platform / phase	Proposed spend	Purpose
Day 8 instagram-08	Instagram Launch	USD 300	Proposed media-only spend; not incurred.
Day 10 instagram-10	Instagram Launch	USD 180	Proposed media-only spend; not incurred.
Day 15 instagram-15	Instagram Education	USD 180	Proposed media-only spend; not incurred.
Day 19 instagram-19	Instagram Optimization	USD 180	Proposed media-only spend; not incurred.
Day 23 instagram-23	Instagram Conversion	USD 180	Proposed media-only spend; not incurred.
Day 24 instagram-24	Instagram Conversion	USD 180	Proposed media-only spend; not incurred.
Day 27 instagram-27	Instagram Conversion	USD 150	Proposed media-only spend; not incurred.
Day 7 linkedin-07	LinkedIn Prelaunch	USD 150	Proposed media-only spend; not incurred.
Day 15 linkedin-15	LinkedIn Education	USD 300	Proposed media-only spend; not incurred.
Day 23 linkedin-23	LinkedIn Conversion	USD 300	Proposed media-only spend; not incurred.
Day 28 linkedin-28	LinkedIn Conversion	USD 300	Proposed media-only spend; not incurred.
Day 8 youtube-08	YouTube Launch	USD 150	Proposed media-only spend; not incurred.
Day 15 youtube-15	YouTube Education	USD 150	Proposed media-only spend; not incurred.
Day 22 youtube-22	YouTube Optimization	USD 150	Proposed media-only spend; not incurred.
Day 29 youtube-29	YouTube Conversion	USD 150	Proposed media-only spend; not incurred.

Funnel mathematics and measurement

Formula: interest completions = impressions × click-through rate × landing-form completion rate. Rates are decimal assumptions; outputs are modeled planning arithmetic, not benchmarks or forecasts.

Scenario	Impressions	CTR	Landing sessions	Form rate	Modeled completions	Classification
Low	75,000	0.6%	450	1.5%	6.75	illustrative planning scenario
Base	120,000	1.0%	1,200	2.5%	30.00	primary planned target; assumptions only
High	180,000	1.6%	2,880	3.5%	100.80	illustrative upside scenario
Stretch	240,000	2.5%	6,000	5.0%	300.00	not a primary target; requires 6,000 sessions and materially stronger traffic conditions or additional authorized reach

Dashboard specification

Track platform-native reach and video attention separately; tag campaign links with source, medium, campaign, content, and test variant; record consent-aware interest-form completions; and maintain a qualitative feedback-theme log. No metric becomes a business result until a real authorized campaign runs.

A/B testing and optimization rules

Test	Hypothesis and variants	Audience / metric / decision
AB-01	A routine-friction hook earns more qualified concept clicks than a general product-reveal hook. **Control:** Day 8 utility-led reveal **Treatment:** Day 8 routine-friction opening	**Audience:** IG-KHI-01 / Maya creative route **Metric:** UTM-tagged concept-page click-through rate **Decision:** Pre-agree a minimum delivery threshold; retain the variant with the stronger primary metric and document context.
AB-02	A LinkedIn document explaining implementation earns more qualified clicks than a professional text post. **Control:** Text-post treatment **Treatment:** Document-post treatment	**Audience:** LI-KHI-01 / Aisha creative route **Metric:** Qualified toolkit or concept-page clicks **Decision:** Compare only after equivalent planned delivery conditions; record no winner if evidence is insufficient.
AB-03	A workplace-toolkit video opening sustains more qualified attention than a feature-led opening. **Control:** Feature-led opening **Treatment:** Workplace-toolkit opening	**Audience:** YT-KHI-01 / Aisha contextual route **Metric:** Average view duration and end-screen click-through rate **Decision:** Use a pre-agreed attention threshold and report both measures, not views alone.
AB-04	‘Choose your path’ creates more qualified interest than ‘request early access’ for undecided routine seekers. **Control:** Request early access **Treatment:** Choose your path	**Audience:** IG-KHI-01 / Maya and Sam retargeting only if lawful and consent-aware **Metric:** Consent-aware form completion rate **Decision:** Require comparable landing experience and documented delivery before deciding.

Risk register and launch safeguards

These controls are a pre-launch operating checklist for a future authorized campaign. They do not imply that a product, account, audience, budget, or approval is currently available.

Risk	Control / contingency owner
Fictional concept mistaken for a live product	Use a clear proposed-concept disclaimer; social lead pauses or corrects creative.
Unsupported environmental, material, or health claim	Legal/claim review before release; substitute factual concept language.
Comment or consent issue	Community lead uses an approved response and escalation path.
Production or platform-delivery delay	Keep a tested static fallback and reschedule with a logged reason.

Contingency sequence

1. Pause the affected placement or creative. 2. Preserve the reason, timing, and relevant evidence in the campaign log. 3. Escalate claims, consent, accessibility, or community issues to the assigned reviewer. 4. Use a pre-approved static fallback only after review. 5. Record the decision before rescheduling. This sequence reduces unsupported claims and keeps outcomes distinguishable from proposed targets.

Approval gates

A marketing lead approves the editorial calendar; a product owner verifies factual claims and availability; a privacy reviewer confirms consent handling; a community lead confirms response coverage; and the budget owner authorizes spend. These roles are proposed responsibilities, not evidence that people or accounts are assigned.

Editorial calendar

Every action below is planned. Proposed publication times are test variables in the audience's local time; they are not evidence of optimal behavior.

Days 1–3

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 1 Instagram Tease	Reel The daily carry problem **Keyword:** commuter hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	A quick-cut commute montage asks: 'One bottle, one routine?' *A proposed RefillLoop routine starts by mapping the moments when your carry setup changes.*	Save the launch reminder. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 2 Instagram Tease	Carousel Modular by design **Keyword:** modular reusable bottle concept **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Exploded-view carousel introduces the proposed replaceable components. *Explore a fictional modular concept built around switching contexts, not a promised product feature.*	Join the early-access list. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 2 LinkedIn Prelaunch	Document post The hidden cost of fragmented routines **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	A proposed product brief: why commuters, facilities teams, and wellbeing leads need fewer hydration handoffs. *The hidden cost of fragmented routines. A proposed product brief: why commuters, facilities teams, and wellbeing leads need fewer hydration handoffs. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Read the concept brief. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 3 Instagram Tease	Stories Your refill friction **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Question sticker: 'What makes reusable habits hard to keep?' *Tell us where your routine breaks: leaving home, arriving at work, or after training.*	Reply with one barrier. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 3 YouTube Tease	Short The refill friction in 20 seconds **Keyword:** reusable hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Vertical script: bag, desk, gym; caption: 'What would make your routine easier?' *Vertical script: bag, desk, gym; caption: 'What would make your routine easier?' This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Subscribe for the concept series. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.

Days 4–6

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 4 Instagram Tease	Reel Built for handoffs **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Desk-to-gym transition shows a proposed modular carry routine. *This concept creative follows the handoffs that make reusable habits harder to repeat.*	Comment with your daily switch. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 4 LinkedIn Prelaunch	Founder-style text post Designing for routines, not novelty **Keyword:** modular reusable bottle concept **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Professional storytelling frames RefillLoop as a fictional exercise in modular service design. *Designing for routines, not novelty. Professional storytelling frames RefillLoop as a fictional exercise in modular service design. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Comment with a workflow friction. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 5 Instagram Tease	Stories Routine reset **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Before/after bag-pack sequence frames refill preparation as a simple ritual. *Save this proposed packing cue and adapt it to your own day.*	Save the packing checklist. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 6 Instagram Tease	Reel Countdown **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Five-second timer and component silhouettes introduce launch week. *Follow the concept countdown; availability is not being promised.*	Turn on reminders. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 6 YouTube Tease	Short A proposed module swap **Keyword:** modular reusable bottle concept **Tags:** refill routine, reusable hydration, modular product concept	Vertical script: show an animated module change with labels for the fictional components. *Vertical script: show an animated module change with labels for the fictional components. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Watch the launch reveal. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.

Days 7–9

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 7 Instagram Prelaunch	Carousel Choose your loop **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Story poll compares commuting, training, and desk-day routines. *Vote: commute, desk day, or training. The answer informs a future concept test.*	Vote for your routine. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 7 LinkedIn Prelaunch	Carousel Workplace refill prompt **Keyword:** workplace wellbeing routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Five slides show a proposed facilities-team activation: location cue, owner, message, measure, learn. *Workplace refill prompt. Five slides show a proposed facilities-team activation: location cue, owner, message, measure, learn. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Save the activation template. Paid	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 8 Instagram Launch	Stories Reveal **Keyword:** modular reusable bottle concept **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Hero reel reveals the fictional RefillLoop concept and its proposed module system. *This reveal introduces an idea to test, not a product ready to buy.*	Visit the concept page. Paid	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 8 YouTube Launch	Long-form RefillLoop concept walkthrough **Keyword:** reusable hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Four-minute narrated demonstration explains the fictional concept, intended users, care assumptions, and open questions. *Four-minute narrated demonstration explains the fictional concept, intended users, care assumptions, and open questions. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Visit the concept page. Paid	17:00 audience local time (test variable) Average view duration / end-screen CTR	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 9 Instagram Launch	Reel What changes **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Carousel contrasts a single-use habit with a planned refill routine without environmental performance claims. *See how a proposed routine map can connect carry, fill, and reset.*	Explore the proposed system. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 9 LinkedIn Launch	Poll Which barrier matters most? **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Poll options test time, carry convenience, cleaning, and forgetting as assumed barriers. *Which barrier matters most?. Poll options test time, carry convenience, cleaning, and forgetting as assumed barriers. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Vote and explain. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.

Days 10–12

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 10 Instagram Launch	Stories First-use flow **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Short demonstration shows proposed assemble, fill, carry, and clean steps. *Watch the concept flow, then decide which step needs more clarity.*	Watch the full demo. Paid	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 11 Instagram Launch	Reel Design choices **Keyword:** modular reusable bottle concept **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Macro shots highlight texture, closure, and module transitions as creative concepts. *Zoom in on the fictional components and share the question you would ask first.*	Save the feature guide. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 11 YouTube Launch	Short Three routine cues **Keyword:** reusable hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Vertical script gives three proposed prompts: bag check, desk reset, post-workout refill. *Vertical script gives three proposed prompts: bag check, desk reset, post-workout refill. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Try one cue. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 12 Instagram Launch	Carousel Routine proof **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Creator-style POV follows a fictional commuter's refill prompts. *This creator-style scenario is illustrative; share the cue that works for you.*	Share your refill cue. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 12 LinkedIn Launch	Case-style post A day in a hybrid-work routine **Keyword:** workplace wellbeing routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	A fictional persona illustrates proposed use across commute, desk, and training. *A day in a hybrid-work routine. A fictional persona illustrates proposed use across commute, desk, and training. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Review the use-case map. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.

Days 13–15

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 13 Instagram Education	Stories Module logic **Keyword:** modular reusable bottle concept **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Carousel explains which proposed component fits work, travel, or training. *Start with the context, then test what you actually need.*	Build a routine. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 14 Instagram Education	Reel Care without claims **Keyword:** refill habit education **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Step-by-step care animation presents a proposed maintenance checklist. *Save this proposed checklist; final product instructions would require validation.*	Download the checklist. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 15 Instagram Education	Stories Habit stack **Keyword:** refill habit education **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Reel pairs filling a bottle with an existing morning habit. *A calendar reminder, bag check, or desk reset can become the cue.*	Try one habit stack. Paid	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 15 LinkedIn Education	Article From awareness to habit **Keyword:** refill habit education **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Thought-leadership article explains the proposed campaign's behavior-design logic and measurement plan. *From awareness to habit. Thought-leadership article explains the proposed campaign's behavior-design logic and measurement plan. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Read the full framework. Paid	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 15 YouTube Education	Long-form How a modular routine is planned **Keyword:** reusable hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Five-minute behind-the-brief video distinguishes design assumptions from verified product claims. *Five-minute behind-the-brief video distinguishes design assumptions from verified product claims. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Comment with a test question. Paid	17:00 audience local time (test variable) Average view duration / end-screen CTR	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.

Days 16–18

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 16 Instagram Education	Reel What is modular? **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Question box answers common concept questions in plain language. *Ask about modules, routine prompts, or what still needs testing.*	Ask a question. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 17 Instagram Education	Carousel Carry confidence **Keyword:** commuter hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Packing sequence demonstrates a proposed workday configuration. *Save this fictional configuration as a discussion prompt, not a performance claim.*	Save this setup. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 17 YouTube Education	Short Desk-to-door carry setup **Keyword:** commuter hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Vertical transition follows a fictional hybrid worker through a proposed configuration. *Vertical transition follows a fictional hybrid worker through a proposed configuration. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Save the setup idea. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 18 Instagram Education	Stories Community prompt **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Story asks followers to post their refill station setup. *Use the campaign prompt to share a setup idea; do not share personal data.*	Tag the campaign prompt. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 18 LinkedIn Education	Carousel What teams can measure **Keyword:** workplace wellbeing routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	A proposed dashboard defines reach, qualified visits, waitlist intent, and feedback—not claimed outcomes. *What teams can measure. A proposed dashboard defines reach, qualified visits, waitlist intent, and feedback—not claimed outcomes. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Download KPI definitions. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.

Days 19–21

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 19 Instagram Optimization	Reel Feature preference **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Two creative directions invite a preference vote: utility-first or lifestyle-first. *Vote so the next proposed message test begins with a clear audience preference.*	Vote in the poll. Paid	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 20 Instagram Optimization	Stories Objection clinic **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Carousel addresses proposed buyer questions about fit, care, and routine. *Send the question that would prevent you from trying a new concept.*	Send a question. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 20 YouTube Optimization	Short Care checklist preview **Keyword:** refill habit education **Tags:** refill routine, reusable hydration, modular product concept	Vertical checklist introduces simple proposed care steps; no health or material-performance claim. *Vertical checklist introduces simple proposed care steps; no health or material-performance claim. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Watch the detailed guide. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 21 Instagram Optimization	Reel Behind the brief **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Reel explains that RefillLoop is a proposed modular-product concept. *This brief separates planned design language from verified product claims.*	Follow for build updates. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 21 LinkedIn Optimization	Text post What the audience told us to test **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	States planned A/B questions, not results: utility versus lifestyle framing and CTA wording. *What the audience told us to test. States planned A/B questions, not results: utility versus lifestyle framing and CTA wording. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Follow the test plan. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.

Days 22–24

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 22 Instagram Optimization	Carousel Desk-day system **Keyword:** commuter hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Fast-cut workflow shows proposed hydration cues between meetings. *Save this proposed reset sequence for your next workday experiment.*	Save the desk routine. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 22 YouTube Optimization	Long-form Workplace refill challenge toolkit **Keyword:** workplace wellbeing routine **Tags:** refill routine, reusable hydration, modular product concept	Six-minute tutorial gives a proposed internal-activation playbook for people teams and facilities leads. *Six-minute tutorial gives a proposed internal-activation playbook for people teams and facilities leads. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Download the toolkit. Paid	17:00 audience local time (test variable) Average view duration / end-screen CTR	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 23 Instagram Conversion	Stories Choose your starting point **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Carousel routes three fictional personas to their suggested configuration. *Choose commuter, desk-day, or training to see the relevant concept path.*	Choose your path. Paid	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 23 LinkedIn Conversion	Document post Modular product storytelling **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Shows how one concept becomes a consumer reel, a workplace brief, and a demonstration script. *Modular product storytelling. Shows how one concept becomes a consumer reel, a workplace brief, and a demonstration script. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Save the content map. Paid	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 24 Instagram Conversion	Reel Early-access value **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Reel states the proposed early-access benefit without promising availability. *Request a future update if the concept is relevant to your routine.*	Request early access. Paid	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.

Days 25–27

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 25 Instagram Conversion	Stories FAQ recap **Keyword:** refill habit education **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Story sequence answers the most common campaign questions collected to date. *Review the questions this fictional campaign is designed to answer.*	Review the concept FAQ. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 25 YouTube Conversion	Short Choose your loop **Keyword:** reusable hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Vertical quiz asks viewers to select commuter, trainer, or desk-day configuration. *Vertical quiz asks viewers to select commuter, trainer, or desk-day configuration. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Comment with your route. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 26 Instagram Conversion	Reel Workplace challenge **Keyword:** workplace wellbeing routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Reel invites teams to test a proposed refill-routine prompt internally. *Download the proposed internal prompt and adapt it with workplace approval.*	Download the team prompt. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 26 LinkedIn Conversion	Poll What earns early-access interest? **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Poll tests clarity, utility, design, and community as proposed message routes. *What earns early-access interest?. Poll tests clarity, utility, design, and community as proposed message routes. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Choose one factor. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 27 Instagram Conversion	Carousel Last-call reminder **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Countdown creative reminds viewers that early-access interest is still proposed. *Join the interest list only if you want a future, consent-aware update.*	Join the interest list. Paid	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 27 YouTube Conversion	Short FAQ in 30 seconds **Keyword:** refill habit education **Tags:** refill routine, reusable hydration, modular product concept	Answer three campaign questions: what is modular, who is it for, and what is still being tested. *Answer three campaign questions: what is modular, who is it for, and what is still being tested. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Ask another question. Organic	17:00 audience local time (test variable) Shorts views / viewed-versus-swiped-away	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.

Days 28–30

Day / platform	Format & theme	Creative / copy or script	CTA / distribution	Time / KPI	Owner / production
Day 28 Instagram Conversion	Stories Community thank-you **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Carousel recaps ideas shared during the fictional campaign exercise. *Share one change that would make your routine easier to repeat.*	Share one improvement. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 28 LinkedIn Conversion	Carousel Implementation checklist **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Practical checklist covers creative approval, landing-page QA, tagging, consent, and response ownership. *Implementation checklist. Practical checklist covers creative approval, landing-page QA, tagging, consent, and response ownership. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Share with a launch lead. Paid	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.
Day 29 Instagram Conversion	Reel Next-loop preview **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Reel previews post-campaign concept testing and feedback review. *Follow for future concept-development updates, not availability promises.*	Stay on the list. Organic	18:30 audience local time (test variable) Reach / 3-second view rate	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 29 YouTube Conversion	Long-form Campaign learning recap **Keyword:** reusable hydration routine **Tags:** refill routine, reusable hydration, modular product concept	Five-minute recap covers proposed experiments, feedback collection, and real-launch prerequisites. *Five-minute recap covers proposed experiments, feedback collection, and real-launch prerequisites. This video describes a fictional proposed campaign concept; it does not claim product availability or outcome. Outline: Hook the routine friction; demonstrate the proposed concept; label assumptions; invite a specific feedback action.*	Join the interest list. Paid	17:00 audience local time (test variable) Average view duration / end-screen CTR	Video producer Script, storyboard, voiceover, captions, thumbnail, end screen, and concept disclaimer.
Day 30 Instagram Conversion	Stories Close and learn **Keyword:** reusable hydration routine **Tags:** #RefillLoopConcept, #ReusableHydration, #RoutineDesign	Story survey asks what content would help a future buyer decide. *Answer one question so a future launch can explain the right thing first.*	Complete the one-question survey. Organic	18:30 audience local time (test variable) Saves, replies, or poll participation	Social lead Vertical edit or 4–6 slide layout; accessibility captions; legal/claim review.
Day 30 LinkedIn Conversion	Text post Campaign learning handoff **Keyword:** reusable hydration routine **Tags:** #WorkplaceWellbeing, #RoutineDesign, #ProductConcept	Closes the fictional exercise with what to preserve, test, and validate before a real launch. *Campaign learning handoff. Closes the fictional exercise with what to preserve, test, and validate before a real launch. This is a proposed planning exercise for teams that want to make routine prompts easier to test.*	Request the planning template. Organic	09:00 target professional local time (test variable) Document opens / qualified clicks / poll votes	B2B content lead Professional copy edit; document design or article QA; UTM link and claim review.

Copy, implementation, and references

Copy variations

• Utility: ‘Your day changes. Your refill routine can have a plan.’ — Explore the concept.

• Routine: ‘One small cue can make the next refill easier to remember.’ — Try a habit stack.

• Professional: ‘Workplace wellbeing ideas need an owner, a cue, and a way to learn.’ — Save the activation template.

• Feedback: ‘What would make a reusable routine easier to repeat?’ — Share one barrier.

Implementation readiness checklist

Before any real campaign: validate product claims and availability; confirm privacy/consent flow; approve creative and accessibility captions; create landing page and UTM taxonomy; configure permitted platform targeting; assign community response coverage; validate conversion events; and obtain separate authorization for publication or paid spend.

Measurement handoff

Create a campaign dashboard with separate paid and organic views. Attribute clicks through a documented UTM taxonomy; record video attention and reach only within the relevant platform; maintain a consent-aware completion log; and compare creative variants only within their defined audience and decision rule. Do not treat modeled scenario outputs as achieved performance.

Sources and attribution

• Digital Marketing & Branding Tasks & Instructions.md — Task 3 required platforms and deliverable scope.

• planning/DIGITAL_MARKETING_RESEARCH_PLAN.md — Approved fictional RefillLoop campaign context.

Limitations

This is a fictional campaign plan. It does not report market research, competitor performance, an existing product, environmental impact, scientific benefit, customer result, campaign result, advertising spend, or publication. The prior Task 2 competitor audit remains evidence-blocked and is not used as a completed finding here.

OCEAN BOTTLE

Enterprise Search Authority & Growth Acquisition Strategy
Task 4 | SEO map, acquisition funnel, email re-engagement, and modeled CAC/ROAS

A research-backed planning report. Company claims are attributed to accessible public pages; keywords, targeting, budgets, and financial results are proposed assumptions, not performance claims.

1. Website context and research boundary

Ocean Bottle remains a suitable startup-origin case study: the independent reviewer reports a B Lab listing describing a 2019 founding and a LinkedIn company profile listing 2018. These differing published statements describe a relatively recent venture; neither is resolved into an unqualified founding date. The accessible commercial website supports the SEO case study; current legal startup classification was not independently established.

Verified page observations

ID / page	Observed public structure	Use in strategy
OB-01 https://oceanbottle.co/	Canonical homepage; title ‘The World's Most Needed Reusable Water Bottle’; description and H1 frame reusable bottles and ocean-plastic collection; navigation links to collections, product pages, impact, FAQs, contact, and news.	Source-specific context
OB-02 https://oceanbottle.co/products/original-bottle	Canonical product page; title ‘Ocean Bottle Original | Insulated Reusable Water Bottle’; product H1 ‘Original Bottle’; delivered markup links to related products, FAQs, and the impact page.	Source-specific context
OB-03 https://oceanbottle.co/pages/faqs	Canonical FAQ page; title ‘FAQs | Ocean Bottle’; H1 ‘Frequently Asked Questions’; visible section headings cover plastic collection, returns, delivery, warranty, pre-orders, product, engraving, and discounts.	Source-specific context
OB-04 https://oceanbottle.co/pages/ocean-impact	Canonical impact page; title and description make Ocean Bottle’s plastic-collection statement; H1 ‘Our Impact’; headings include ‘1 for 1000’, ‘How it works’, partners, and a company statement about B Corp certification.	Source-specific context
OB-05 https://www.bcorporation.net/en-us/find-a-b-corp/company/ocean-bottle/	B Lab directory could not be retrieved from this cloud environment; it is not used to validate certification.	Unavailable; excluded from validation

Assessment

The delivered pages expose canonical URLs, distinct titles, one visible H1 per sampled page, and links between product, FAQ, impact, collection, contact, and news routes. This supports a practical topic-to-page model. Mobile experience, CWV, crawl coverage, structured-data validity, indexing, accessibility conformance, rankings, and analytics were not tested and remain implementation checks.

Conversion-path interpretation

Observed navigation and page relationships support a proposed path from impact or educational discovery to product review, then FAQ/delivery reassurance and add-to-cart. This is an interpretation of public structure, not evidence of user behavior or conversion performance.

2. Long-tail keyword architecture

Keyword entries are qualitative opportunities created from page language, page roles, and customer questions. Search volume, difficulty, ranking position, and click forecasts were not accessed.

Keyword / intent	Target page	Priority / rationale
insulated reusable water bottle *transactional*	/products/original-bottle	High — Product title and description explicitly use insulated and reusable.
reusable water bottle with ocean plastic collection *commercial*	/pages/ocean-impact	High — Impact message is present on homepage and impact page.
double walled insulated reusable bottle *transactional*	/products/original-bottle	High — Derived from the product-page description; no volume claim.
how does ocean plastic collection work *informational*	/pages/ocean-impact	Medium — Maps to the observed ‘How it works’ section.
reusable bottle warranty and returns *informational*	/pages/faqs	Medium — Maps to observed FAQ categories.
reusable water bottle delivery information *informational*	/pages/faqs	Medium — Maps to observed delivery FAQ section.
ocean bottle original features *commercial*	/products/original-bottle	Medium — Brand-plus-product phrase mapped to the Original Bottle page.
reusable bottle engraving gift *transactional*	/pages/engraving	Medium — Existing navigation exposes an engraving route; page content was not audited.
sustainable corporate reusable bottle gifting *commercial*	/pages/co-brand	Medium — Existing navigation exposes co-brand route; page content was not audited.
why use a reusable water bottle *informational*	/blogs/news	Low — Proposed educational article cluster; no volume or ranking claim.
how to clean an insulated reusable bottle *informational*	/pages/faqs	Low — Proposed support-content expansion from product FAQ intent.
reusable bottle workplace wellbeing gift *commercial*	/pages/wholesale	Low — Proposed B2B discovery topic; wholesale navigation was observed but content was not audited.

Prioritization method

P1/P2/P3 reflects closeness to an accessible product, impact, support, or proposed education page and clarity of intent—not market size. Start with P1 product and impact pages; use Search Console and analytics only after authorized access to verify queries, impressions, and outcomes.

3. On-page SEO optimization map

Existing facts are limited to the sampled pages and their delivered metadata/headings. Titles, descriptions, hierarchy, links, and content changes below are proposed implementation work.

P1 | Product — https://oceanbottle.co/products/original-bottle

Primary / secondary	Proposed title and meta	Proposed hierarchy and links	Gap / measurement
insulated reusable water bottle double walled reusable bottle, Ocean Bottle Original features	Original Bottle | Insulated Reusable Water Bottle | Ocean Bottle *Explore the Ocean Bottle Original, an insulated reusable water bottle. Review features, FAQs and Ocean Bottle's stated collection model.*	H1: Original insulated reusable water bottle H2: Original Bottle features; How the stated 1 for 1000 model works; Delivery, warranty and care FAQs Links: /pages/ocean-impact, /pages/faqs, /collections/water-bottles	Add scannable feature-to-benefit copy, care guidance, and a contextual FAQ block without adding unsupported environmental or material claims. *Organic landing sessions, add-to-cart rate, FAQ-link clicks, and purchase rate in consented analytics.*

P1 | Impact explainer — https://oceanbottle.co/pages/ocean-impact

Primary / secondary	Proposed title and meta	Proposed hierarchy and links	Gap / measurement
reusable water bottle with ocean plastic collection how ocean plastic collection works, ocean plastic collection model	How Ocean Bottle's Plastic Collection Model Works *Learn how Ocean Bottle describes its stated 1 for 1000 plastic-collection model, the questions it answers, and related reusable bottle pages.*	H1: How Ocean Bottle describes its collection model H2: The stated 1 for 1000 model; Questions to answer before purchase; Explore reusable bottle options Links: /products/original-bottle, /pages/faqs, /collections/water-bottles	Create a concise explanatory summary with dated methodology links and a product-to-impact decision path; retain clear attribution for company claims. *Organic entrances, product-page click-through, engaged time, and assisted add-to-cart events.*

P2 | Support / trust — https://oceanbottle.co/pages/faqs

Primary / secondary	Proposed title and meta	Proposed hierarchy and links	Gap / measurement
reusable bottle warranty and returns reusable water bottle delivery information, insulated bottle care	Reusable Bottle FAQs: Delivery, Warranty and Care | Ocean Bottle *Find Ocean Bottle FAQs about delivery, warranty, returns, product care, engraving and the company's stated collection model.*	H1: Ocean Bottle delivery, warranty and care FAQs H2: Delivery and returns; Warranty and product care; Collection-model questions Links: /products/original-bottle, /pages/ocean-impact, /pages/contact	Add jump links, concise answer summaries, and product-context links; validate structured-data eligibility before implementation. *Organic FAQ entrances, support-contact rate, product click-through, and return-visit rate.*

P3 | Proposed educational hub — https://oceanbottle.co/blogs/news

Primary / secondary	Proposed title and meta	Proposed hierarchy and links	Gap / measurement
why use a reusable water bottle reusable bottle habit guide, how to clean an insulated reusable bottle	Reusable Bottle Guides and Care Advice | Ocean Bottle *Browse proposed reusable bottle guides, care explainers and impact-model context, with links to relevant Ocean Bottle product and FAQ pages.*	H1: Reusable bottle guides and care advice H2: Choose a reusable bottle; Care and cleaning guidance; Understand the stated collection model Links: /products/original-bottle, /pages/faqs, /pages/ocean-impact	Build a small topic cluster with author/date governance and links to commercial and support pages; the current blog content was not audited. *Indexed pages, organic non-brand entrances, assisted product clicks, and content-to-product CTR.*

4. Paid acquisition funnel and measurement

All stages are proposed. Retargeting is conditional on valid consent, applicable policy, and authorized account controls.

Stage	Audience / channel	Message / landing page	CTA, event and KPI
Awareness	New reusable-hydration and gift researchers *Google non-brand search; Meta/YouTube prospecting*	Problem/utility and attributed impact explainer /pages/ocean-impact	Read the model **Event:** Engaged visit **KPI:** Reach, qualified clicks, engaged sessions
Consideration	Visitors who viewed product or impact pages *Search remarketing only where consented; Meta/YouTube retargeting where permitted*	Feature, care, FAQ and comparison-oriented proof /products/original-bottle	Explore Original Bottle **Event:** Product view / FAQ interaction **KPI:** Product CTR, add-to-cart rate
Conversion	High-intent product viewers and cart visitors *Brand and product search; consented cart retargeting*	Clear product choice, delivery/warranty pathway /products/original-bottle	Add to cart **Event:** Purchase **KPI:** Cost per purchase, CAC, revenue
Retention	Consented purchasers and subscribers *Email only; no paid retargeting without separate consent*	Care, use and timely replenishment/accessory education /pages/faqs	Get care guidance **Event:** Repeat purchase / support resolution **KPI:** Repeat purchase rate, unsubscribes, support contacts

Attribution and optimization

• Use consent-aware analytics and a documented UTM taxonomy: source, medium, campaign, content, term.

• Keep paid-platform reporting separate from analytics attribution; reconcile purchase events only after consent and implementation review.

• Define CAC as media spend divided by attributed new customers; define ROAS as attributed revenue divided by media spend. Zero denominators produce an explicit unavailable result.

90-day proposed budget

Allocation	Proposed GBP	Planning role
Google Search	£4,500	Media delivery
Meta prospecting	£3,000	Media delivery
YouTube	£1,500	Media delivery
Consented retargeting reserve	£1,000	Media delivery
Measurement and creative	£2,000	Creative, tracking and reporting readiness

Proposed 90-day planning budget; no spend is authorized or incurred.

5. Consent-aware email re-engagement

These are proposed automation rules only. They require documented lawful basis, clear preference controls, a working unsubscribe mechanism, suppression of opted-out contacts, frequency caps, and review against the relevant privacy and email rules before activation.

Workflow / entry	Sequence from entry	Conversion / exit
Welcome / nurture Confirmed marketing opt-in; no prior purchase, active cart or browse workflow.	0h: Welcome to your next refill routine 48h: What would make refilling easier for you? 120h: Your reusable bottle questions, answered	qualified_product_view, faq_visit, add_to_cart Purchase ends pre-purchase flows; repeat purchase ends post-purchase flow. All flows exit on suppression, expiry or final-message completion.
Browsing without purchase Two consented product views within seven days; no cart or purchase.	24h: Still comparing reusable bottle options? 72h: What do you need to know before choosing?	qualified_product_view, faq_visit Purchase ends pre-purchase flows; repeat purchase ends post-purchase flow. All flows exit on suppression, expiry or final-message completion.
Cart abandonment Clock starts at last cart activity; only enroll when no purchase and separate marketing consent exists; first message requires four inactive hours.	4h: Would you like to review your bottle choice? 52h: One last reminder, with the practical details	checkout_started, purchase Purchase ends pre-purchase flows; repeat purchase ends post-purchase flow. All flows exit on suppression, expiry or final-message completion.
Post-purchase re-engagement First purchase and confirmed delivery event; separate marketing consent; unresolved support issues pause entry.	336h: Make the most of your reusable bottle 504h: How is your refill routine working? 720h: Would another bottle fit a real need?	care_guide_visit, feedback_or_support_contact, repeat_purchase Purchase ends pre-purchase flows; repeat purchase ends post-purchase flow. All flows exit on suppression, expiry or final-message completion.

Automation decision table

Event / condition	Decision
Unsubscribe, consent withdrawal, bounce, complaint	Suppress immediately; clear active flow; no further marketing drafts.
Purchase / repeat purchase	Exit pre-purchase / post-purchase sequence; care entry needs confirmed delivery and consent.
Duplicate / priority	One flow at a time: post-purchase > cart > browse > welcome. Duplicate entries do not restart clocks.
Frequency cap / support issue	At most one message per 24h and three per rolling seven days; defer without advancing. Support pauses all messages.
Inactivity / deadline / completion	Expire or complete; no replay in pilot. Recheck consent and suppression before every message.

Supporting appendix

DM_Task4_Email_Workflow_Appendix.pdf contains every message’s full body, preview, CTA, conversion event and consent/exit rules. Machine-readable messages and a synthetic event simulator are in research/task4/. No automation is activated.

6. Financial model, implementation order, and limitations

Formula: impressions = media budget ÷ blended CPM × 1,000; sessions = impressions × CTR; customers = sessions × purchase conversion rate; CAC = media spend ÷ customers; ROAS = attributed revenue ÷ media spend. The figures below are scenario inputs, not benchmarks, forecasts, or results.

Scenario	CPM / CTR	Impressions / sessions	Conv. / customers	AOV / revenue	Media CAC / ROAS	All-in cost / customer
Low	£12.80 / 0.8%	781,250 / 6,250	1.2% / 75	£45 / £3,375	£133.33 / 0.34x	£160.00
Base	£10.00 / 0.8%	1,000,000 / 8,000	2.0% / 160	£55 / £8,800	£62.50 / 0.88x	£75.00
High	£8.00 / 0.8%	1,250,000 / 10,000	3.2% / 320	£65 / £20,800	£31.25 / 2.08x	£37.50

Media versus all-in economics

Media CAC retains the GBP 10,000 advertising denominator. Separately, all-in acquisition cost per customer = full GBP 12,000 project allocation / modeled customers: Low GBP 160.00, Base GBP 75.00, High GBP 37.50. These are planning allocations, not accounting outcomes. ROAS always remains attributed revenue / advertising spend; creative costs do not change its denominator.

Recommended sequence

1. Validate claims, consent, tracking plan, and analytics governance. 2. Implement P1 product and impact maps. 3. Publish only approved, attributed content. 4. Instrument product, cart, purchase, and email events. 5. Launch a small authorized test with a spend cap; compare outcomes against the model, not against assumed figures. 6. Reallocate only after a documented attribution and quality review.

Sources and limitations

Official page records: homepage, Original Bottle, FAQs, Ocean Impact (Codex retrieval, 13 October 2026 UTC). Codex's B Lab retrieval returned 403. Separately, reviewer-supplied observations received 13 October 2026 report B Lab certification/founding in 2019 and LinkedIn founding in 2018; reviewer collection dates were not supplied. The discrepancy remains unresolved. URLs: https://www.bcorporation.net/en-us/find-a-b-corp/company/ocean-bottle/ and https://www.linkedin.com/company/the-ocean-bottle/. No real keyword metrics, rankings, analytics, conversion, revenue or technical performance was verified. Company environmental figures remain attributed, without independent outcome validation.

welcome-1 | +0h | Welcome to your next refill routine

Preview: Start with product details, practical questions and a clear choice.

Hello,

Thank you for choosing to hear from Ocean Bottle. If you are exploring a reusable bottle, start with the Original Bottle page to review the available features and options. Our FAQs cover delivery, returns and warranty questions so you can decide at your own pace.

You can also read how Ocean Bottle describes its collection model on the impact page. We do not ask you to take an environmental statement on trust: review the explanation before deciding.

Explore the Original Bottle when you are ready.

welcome-2 | +48h | What would make refilling easier for you?

Preview: A simple planning prompt for commuting, work or everyday use.

Hello,

Think about where a reusable bottle would fit into your day: the commute, your desk or a bag you already carry. Choose a practical routine first, then compare the Original Bottle details with what you need.

If you have questions about care, delivery or warranty, our FAQ page is a useful next stop. There is no need to make a choice before those questions are answered.

Read the FAQs and return to the product page when it suits you.

welcome-3 | +120h | Your reusable bottle questions, answered

Preview: Review the details once more, or update what you want to hear about.

Hello,

This is the last message in this welcome series. If you are still comparing options, the Original Bottle page brings the product information together, and the FAQs explain delivery and support topics.

Take a look only if the bottle fits your needs. You can change your email preferences or unsubscribe at any time using the links below.

Thank you for considering Ocean Bottle.

Suppression: Recheck marketing consent, unsubscribe, withdrawal, hard bounce, complaint and global suppression before every message.

TRACK TWO

Python Programming

The following **complete 14-page approved report** is imported unchanged. It covers the three completed programming tasks, including implementation approach, demonstrations, test evidence and the stated limitations.

Task	Implementation focus	Verified evidence retained
Task 2	Fibonacci sequence generation with input handling and timing measurements.	Structured output, edge-case coverage, benchmark context and computational limits.
Task 3	Safe file organization and text extraction using standard-library filesystem tools.	Validation, overwrite prevention, error handling and the corrected crafted path-traversal case.
Task 4	Multi-intent terminal chatbot using rule-based normalization and conversation routing.	Input validation, fallback handling, demonstrations, tests and known rule-based limitations.

Reproducibility: complete code is retained in `internship/task2.py`, `internship/task3.py` and `internship/task4.py`; corresponding automated tests are in `tests/`. The final audit records 55 Python-suite tests within its 129 cross-track unit tests.

The imported report begins on Portfolio page 45. Its Task 2, Task 3 and Task 4 sections begin on pages 47, 50 and 53 respectively.

PROGREE

Python Programming Internship

Technical Report — Tasks 2, 3 and 4

Report date	13 October 2026
Evidence source	Fresh Phase 5 validation from commit `0ead4fcfc3a9`
Scope	Fibonacci generation, safe file automation, and a rule-based terminal chatbot
Identity	No participant identity, registration number, or organizer endorsement is represented.

Prepared from executed local evidence only. This report does not confirm certificate eligibility, form submission, or an organizer deadline hour/timezone.

Executive summary. Assignment objectives and verification

The authoritative Python assignment asks for a Fibonacci module with timeit benchmarking, a safe file-organization and text-parsing utility, and a multi-intent terminal chatbot. This report covers the three completed technical tasks and the fresh validation run used for this document.

• The consolidated suite executed 54 tests and passed in 1.678 seconds.

• Task 2 evidence contains real JSON outputs, an invalid-input diagnostic, and 5-repeat × 100-call timeit measurements in seconds.

• Task 3 evidence records 7 planned/applied moves, a collision-safe destination, 9 verified CSV records, a zero-move repeat run, and an output-safety rejection.

• Task 4 evidence contains real terminal transcripts for multi-intent routing, clarification recovery, reset, unsupported input, EOF, and Ctrl+C.

Scope and limitations

All Task 3 data is synthetic. Benchmark timings vary by environment. The report does not include Task 1, personal identity, credentials, a certificate decision, track-eligibility confirmation, or a Google Form submission claim.

Table of contents

Section	Contents
1	Task 2 — Fibonacci
2	Task 3 — File automation
3	Task 4 — Rule-based chatbot
4	Cross-task quality assurance
5	Conclusion and appendix

1. Task 2 — Fibonacci generation

Objective and requirements mapping

The module returns exactly the requested number of Fibonacci terms beginning with 0 and 1. It validates negative and invalid-type inputs, emits structured JSON arrays through the CLI, and measures generation with Python's timeit framework.

Requirement	Implemented behavior
Exact list output	Iterative function returns a Python list; CLI emits JSON.
Validation	Negative integers raise ValueError; bool and non-integers are rejected.
Benchmark	timeit measures fibonacci(count) only, excluding printing and JSON encoding.

Algorithm and validation excerpt

```
def fibonacci(count: int) -> list[int]:
    """Return exactly ``count`` Fibonacci terms beginning with 0 and 1.

    The algorithm is iterative. It uses O(count) list storage, and each addition uses
    Python arbitrary-precision integers; additions become more expensive as values
    grow, so the usual constant-cost arithmetic simplification does not apply.
    """
    _validate_count(count)
    terms: list[int] = []
    previous, current = 0, 1
    for _ in range(count):
        terms.append(previous)
        previous, current = current, previous + current
    return terms

def _validate_positive(value: int, *, label: str) -> None:
    if isinstance(value, bool) or not isinstance(value, int):
        raise TypeError(f"{label} must be an integer, not {type(value).__name__}")
    if value <= 0:
```

The loop performs O(count) iterations and stores O(count) integers. Python's arbitrary-precision integers make additions progressively more expensive as the sequence grows, so large-count cost is not constant per iteration.

1. Task 2 — executed outputs and timeit

Fresh command-line evidence

Command case	Observed result
count 10	`[0,1,1,2,3,5,8,13,21,34]`
count 0	`[]`
count 100	Exit 0; retained JSON contains 100 terms and ends with 218922995834555169026.
count -1	Exit 2; `task2.py: error: count must be greater than or equal to zero`

Benchmark methodology and results

timeit: fibonacci(count) only; excludes printing, JSON encoding, and metadata. Units: seconds. Results are measurements from this environment, not performance guarantees.

Terms	Sample totals, seconds (5 repeats × 100)	Min/call, seconds	Median/call, seconds
10	6.6701e-05, 6.512e-05, 6.0401e-05, 6.3222e-05, 6.1196e-05	6.0401e-07	6.3222e-07
100	0.000532159, 0.000664326, 0.000481606, 0.00156766, 0.0022289	4.81606e-06	6.64326e-06
1000	0.0105699, 0.00737288, 0.00741217, 0.0073413, 0.018092	7.3413e-05	7.41217e-05

1. Task 2 — quality evidence

Testing and limitations

The full test suite includes exact small outputs, recurrence behavior, a larger known term, negative and invalid types, JSON CLI behavior, resource limits, benchmark validation, and real timing metadata. The consolidated run passed; the report does not treat timing values as hardware-independent targets.

Reproduction commands

```
python -m internship.task2 --count 10
python -m internship.task2 --count 0
python -m internship.task2 --count -1
python -m internship.task2 --benchmark --benchmark-counts 10 100 1000 --repeats 5 --number 100
```

Evidence reference: evidence/phase5/outputs/task2-count-10.json, task2-count-0.json, task2-count-100.json, task2-invalid.stderr, and task2-benchmark.json.

2. Task 3 — safe file automation

Objective and workflow

Task 3 accepts an explicit synthetic workspace, plans immediate-file organization by final extension, optionally applies collision-safe moves, extracts emails and transaction IDs from relevant UTF-8 text files, and writes a read-back-verified master CSV.

Preview	Apply	Extract and verify
Validate workspace and plan deterministic moves without writing.	Require --apply, preflight UTF-8 input, refuse overwrites, and record outcomes.	Extract ordered records and atomically write/read back a UTF-8 CSV.

Safety boundaries

• Preview is the default; writes require an isolated child under artifacts/task3.

• Canonical fixtures, the artifacts parent, path traversal, symlinks, arbitrary directories, and unsuitable CSV names are rejected.

• Preflight decoding occurs before apply moves; later filesystem races can still produce truthful partial-failure reporting.

• Formula-leading CSV cells are sanitized for spreadsheet safety while raw synthetic evidence remains traceable.

```
def plan_organization(root: str | Path, *, exclude_names: set[str] | None = None) ->
  list[PlannedMove]:
    """Plan deterministic moves of immediate regular files without changing the
      filesystem."""
    workspace = validate_workspace(root)
    reserved: set[Path] = set()
    moves: list[PlannedMove] = []
    for source in _safe_immediate_files(workspace, excluded_names=exclude_names):
        destination = _collision_free_destination(workspace, source, reserved)
        reserved.add(destination)
        moves.append(
            PlannedMove(
                source_path=source.relative_to(workspace).as_posix(),
                destination_path=destination.relative_to(workspace).as_posix(),
            )
        )
    return moves

def apply_plan(root: str | Path, moves: Iterable[PlannedMove]) -> dict[str, Any]:
    """Apply planned moves without overwriting; report every completed or failed move."""
    workspace = validate_workspace(root, writable=True)
```

2. Task 3 — executed organization and CSV

Fresh isolated demonstration

A fresh copy of fixtures/task3 was placed under artifacts/task3/phase5-integration. Preview planned 7 moves without a CSV. Apply completed 7 moves with zero failures and produced 9 verified records. The repeat run planned 0 moves and safely regenerated the verified master CSV.

Before/after organization example

Source	Destination	Outcome
.metadata	no_extension/.metadata	completed
archive.tar.GZ	gz/archive.tar.GZ	completed
empty.txt	txt/empty.txt	completed
inbound.LOG	log/inbound.LOG	completed
notes.txt	txt/notes__1.txt	completed
readme	no_extension/readme	completed
report.TXT	txt/report.TXT	completed

The existing txt/notes.txt caused the top-level notes.txt to move to txt/notes__1.txt rather than overwrite content.

Verified master CSV excerpt (synthetic data)

```
source_path,line_number,kind,value
log/inbound.LOG,2,email,demo.alpha@example.test
log/inbound.LOG,2,email,demo.beta@example.test
log/inbound.LOG,2,transaction_id,TXN-A1B2C3
log/inbound.LOG,2,transaction_id,TXN-Z9Y8X7
log/inbound.LOG,3,transaction_id,TXN-A1B2C3
```

2. Task 3 — integrity, idempotency, and errors

Integrity and regression evidence

• The multiset of SHA-256 file-content hashes before and after organization matched after excluding the generated CSV and marker.

• A second apply planned zero moves and retained nine verified records.

• A deliberate --csv notes.txt attempt exited 2 before any move or write; input hashes remained unchanged.

• The full suite exercises preview/apply, collisions, idempotency, symlink/unsafe-root rejection, malformed UTF-8 preflight, CSV read-back, formula protection, and CLI error exits.

Relevant implementation excerpt

```
def write_master_csv(root: str | Path, output: str | Path, records: Iterable[Record]) ->
  list[dict[str, str | int]]:
    """Atomically write and read back a sanitized master CSV inside a workspace."""
    workspace = validate_workspace(root, writable=True)
    target = _validate_csv_target(workspace, output)
    exported = [_export_record(record) for record in records]
    temporary_name: str | None = None
    try:
        try:
            with tempfile.NamedTemporaryFile("w", encoding="utf-8", newline="",
              dir=workspace, prefix=".task3-", suffix=".tmp", delete=False) as
              temporary:
                temporary_name = temporary.name
                writer = csv.DictWriter(temporary, fieldnames=CSV_FIELDS,
                  lineterminator="\n")
                writer.writeheader()
                writer.writerows(exported)
            os.replace(temporary_name, target)
            temporary_name = None
        except OSError as error:
            raise ExtractionError(f"could not safely write {target.name}: {error}")
              from error
    finally:
        if temporary_name:
            Path(temporary_name).unlink(missing_ok=True)

3. Task 4 — multi-intent rule-based chatbot

Architecture and state

The terminal bot is local and rule based. It normalizes Unicode NFKC input, casefolds, replaces punctuation, normalizes whitespace, applies functional dictionary routing, and uses nested if/elif/else logic for pending choices. It has task guidance, Python learning, and submission guidance trees.

State field	Purpose
current_tree / pending_choice	Retains the current help tree and the next valid contextual choices.
last_intent	Records each actual recognized or reported intent, including contextual follow-ups.
turn_count / history	Counts turns and keeps the 20 newest normalized inputs in process only.
clarification_count	Escalates a repeated pending-choice miss; reset/cancel clears it.

Normalization excerpt

```
def normalize(text: str) -> str:
    """Normalize Unicode input with NFKC, casefolding, punctuation and whitespace."""
    if not isinstance(text, str):
        raise TypeError("text must be a string")
    normalized = unicodedata.normalize("NFKC", text).casefold()
    characters = [" " if unicodedata.category(char).startswith("P") else char for char in
      normalized]
    return " ".join("".join(characters).split())

def _tokens(text: str) -> set[str]:
    return set(text.split())
```

3. Task 4 — routing and recovery

Routing/state-transition flow

Input
↓ normalize: NFKC, casefold, punctuation, whitespace
↓ global priority: exit → reset/cancel → help
↓ explicit topic switches: tasks / Python / submission
↓ pending contextual tree: nested choices
↓ first ambiguity: contextual clarification
↓ repeated ambiguity: explicit choices + help/reset
↓ unknown: helpful fallback

The implementation gives explicit topic switches priority over earlier pending state. Recognized input resets clarification recovery; reset/cancel clears context, history, fallback count, and clarification count.

Routing excerpt

```
        def handle_turn(text: str, session: SessionState) -> TurnResult:
            """Route one user turn and mutate only the supplied in-memory session."""
            normalized = normalize(text)
            _record(session, normalized)
            intent = detect_intent(normalized, session)
            if intent == "exit":
                session.active = False
                session.last_intent = "exit"
                return TurnResult("Goodbye. This session was local and no information was saved
                  or submitted.", "exit", True)
            if intent == "reset":
                session.current_tree = None
                session.pending_choice = "root_choice"
                session.last_intent = "reset"
                session.history = [normalized]
                session.fallback_count = 0
                session.clarification_count = 0
                return TurnResult("Context reset. Choose tasks, python, or submission.",
                  "reset")
            if intent == "blank":
                session.last_intent = "blank"
                return TurnResult("Please enter a topic, or type help for tasks, python, and
                  submission guidance.", "blank")
            if intent in INTENT_HANDLERS:
                return INTENT_HANDLERS[intent](session, normalized)
            if intent == "pending":
                result = _pending_response(session, normalized)
                session.last_intent = result.intent
                if result.intent != "ambiguous":
                    session.clarification_count = 0
                    session.fallback_count = 0
                return result
            session.fallback_count += 1
            session.last_intent = "unknown"
            if session.fallback_count >= 2:
                return TurnResult("I still do not recognize that request. Type help, or reset to
                  clear the current context.", "unknown")
            return TurnResult("I do not recognize that request. Try tasks, python, submission, help,
              reset, or exit.", "unknown")
```

3. Task 4 — genuine conversations and limits

Executed multi-intent transcript

```
Welcome to the Progree Python assignment helper. Choose: tasks, python, or submission. Type help
  at any time; reset/cancel clears context; exit ends this local session.
you> I can help with internship tasks (2, 3, 4), Python learning, or submission guidance. Which
  area would you like?
you> Task 2 generates exactly count Fibonacci terms, validates invalid input, emits JSON, and
  benchmarks with timeit. Reproduce it with: python -m internship.task2 --count 10. Ask about
  output, validation, or benchmarking.
you> Benchmark Task 2 with: python -m internship.task2 --benchmark --benchmark-counts 10 100
  1000 --repeats 5 --number 100.
you> Python learning: choose fundamentals, lists and loops, functions and validation, or regex
  and file handling.
you> That is ambiguous here. Choose fundamentals, lists and loops, functions and validation, or
  regex and file handling.
you> I still need a clear choice. Choose fundamentals, lists and loops, functions and
  validation, or regex and file handling. Type help for the main menu or reset to clear this
  context.
you> Lists keep ordered values. A for loop visits each item: for value in values: ... . For Task
  2, the list stores Fibonacci terms in generation order. Ask about functions, regex, or another
  Python topic.
you> Submission guidance: the notice says complete at least 3 of 4 tasks and combine work into
  one PDF. It names 18 October 2026, but no exact deadline hour is verified. Ask about the PDF,
  deadline, or Task 1.
you> The supplied notice names 18 October 2026. Its exact cutoff time and timezone are not
  confirmed.
you> I can clarify the three-of-four rule, one-PDF requirement, deadline date, or optional Task
  1. Which one?
you> Context reset. Choose tasks, python, or submission.
you> Goodbye. This session was local and no information was saved or submitted.
```

Unsupported Task 4 input and recovery

```
you> Task 4 is this local rule-based terminal chatbot. It normalizes text, routes intents with a
  dictionary, tracks session state, and handles fallbacks. It is being used now; final PDF work
  is not part of this session.
you> I do not recognize that as a Task 4 question. Ask about operation, intents, normalization,
  or session state; or type help/reset.
you> I still need a clear choice. Choose operation, intents, normalization, or session state.
  Type help for the main menu or reset to clear this context.
you> The session keeps the current tree, pending choice, last intent, turn count, and only the
  most recent 20 normalized turns in memory. It is not persisted.
you> Goodbye. This session was local and no information was saved or submitted.
```

Separate executed captures confirm EOF ends with “End of input” and SIGINT ends with “Interrupted safely”; both exit 0. No session state is persisted and no external service, credentials, or form submission is used.

4. Cross-task quality assurance

Consolidated verification

Check	Fresh observed result
Automated tests	54 tests passed in 1.678 seconds.
Task 2 timeit	Three counts, five repeat totals each, 100 executions per repeat; units are seconds.
Task 3 integrity	Content-hash multiset matched; safe failure preserved inputs; repeat planned zero moves.
Task 4 termination	Scripted exit, EOF, and Ctrl+C all captured with exit 0.
Original documents	All four original assignment documents matched the approved-starting-commit SHA-256 digests.

Environment and reproducibility

Python 3.12.14; platform: Linux-6.18.44-x86_64-with-glibc2.41; x86_64. Fresh source commit: `0ead4fcfc3a94d928af7e7827793a06c7fc17352`. Consolidated manifest: evidence/phase5/manifest.json. It records exact commands, exit codes, UTC execution timestamp, retained-output paths, fixture references, and SHA-256 values.

5. Conclusion

Tasks 2–4 are implemented and freshly verified in this repository: iterative Fibonacci generation with parameter checks and timeit evidence; safe synthetic-workspace organization and text parsing with verified CSV output; and a stateful rule-based terminal chatbot with help trees, recovery, and graceful termination.

Skills demonstrated

• Python API and CLI design, validation, JSON output, and timing methodology.

• Filesystem safety boundaries, deterministic organization, regular expressions, CSV read-back, and integrity checks.

• Unicode normalization, explicit state machines, dictionary dispatch, nested contextual decisions, and terminal resilience.

• Evidence provenance, report automation, and independent PDF quality assurance.

Outstanding human verification

• Python Programming track eligibility and organizer acceptance of Tasks 2–4.

• Certificate name, registration ID, submission email/WhatsApp number, and form upload constraints/accessibility.

• Organizer deadline cutoff hour and timezone; only the date 18 October 2026 is supplied.

• Authorized Google Form submission after independent review.

Future improvements could expand the chatbot vocabulary, add configurable Task 3 patterns, and compare benchmark trends across controlled environments. They are not claimed as completed here.

Appendix. Reproduction commands and references

Exact command forms recorded in the Phase 5 manifest

```
python -m unittest discover -s tests -v
python -m internship.task2 --count 10
python -m internship.task2 --count 0
python -m internship.task2 --count 100
python -m internship.task2 --count -1
python -m internship.task2 --benchmark --benchmark-counts 10 100 1000 --repeats 5 --number 100
python -m internship.task3 --root artifacts/task3/phase5-integration
python -m internship.task3 --root artifacts/task3/phase5-integration --apply --csv master.csv
python -m internship.task3 --root artifacts/task3/phase5-integration --apply --csv master.csv
python -m internship.task3 --root artifacts/task3/phase5-safe-failure --apply --csv notes.txt
```

Repository references

Purpose	Path
Authoritative assignment	Python Programming Tasks & Instructions.pdf
Submission messages	Text Message 1.md; Text Message 2.md
Phase 5 manifest	evidence/phase5/manifest.json
Report generator	tools/generate_report.py
Task sources	internship/task2.py; internship/task3.py; internship/task4.py

The report's displayed execution outcomes come from retained Phase 5 evidence files validated by their SHA-256 digests before PDF generation.

SELECTIVE EVIDENCE

Verification and project evidence

This portfolio adds navigation and context pages around the approved candidates. The imported report pages are preserved as PDF page objects; they are not rasterized or redesigned. Final mechanical and visual checks are recorded in the package QA report.

Evidence	Portfolio location	Validation basis
Marketing candidate	Pages 6–43 (38 pages)	Every imported page is compared with the approved Marketing final candidate for text, content stream, dimensions, rotation and rendered pixels.
Python candidate	Pages 45–58 (14 pages)	Every imported page is compared with the approved Python final candidate using the same preservation checks.
Research and models	Canonical digital_marketing/research/ paths	Task 3 calendar and Task 4 strategy data supply the figures on page 4; claims stay labeled fictional, proposed, modeled or evidence-limited.
Implementation and tests	internship/ and tests/	The retained final audit records 129 cross-track unit tests, including 55 in the Python suite; the current portfolio verifier checks document assembly.
Historical QA	evidence/ultimate_final_review/	Preservation manifests, rendered-page review, privacy scan, findings and remediation records remain in their canonical locations.

Important qualification: technical preservation and QA show that the files are ready for owner review. They do not establish form acceptance, two-track certificate eligibility or organizer acceptance of Marketing Task 2's documented evidence limitations.

CLOSE AND REPRODUCE

Conclusion and source index

This single-PDF review candidate presents Digital Marketing & Branding first and Python Programming second, with all 52 approved candidate-report pages preserved in order. The project remains transparent about proposed work, model outputs and the unresolved administrative conditions for submission.

Reproduce: from the repository root, run `python tools/build_complete_internship_portfolio.py --replace` followed by `python tools/verify_complete_internship_portfolio.py`. The verification report and manifest are written into this package.
